With: Alexi Quintana, Hanyu Chwe, Stefan McCabe (Northeastern University)

From April 17 to 26 we conducted a large, 50 state survey, the results of which are presented in this report. The first section of the report looks at the nation as a whole while the second section focuses on individual states and comparisons across states.

Note on methods:

We surveyed 22,912 individuals across all 50 states plus the District of Columbia. The survey was conducted on 17-26 April 2020 by PureSpectrum via an online, nonprobability sample, with state-level representative quotas for race/ethnicity, age and gender. In addition to balancing on these dimensions, we reweighted our data using the same demographic characteristics.

In our discussion below, we omit mentioning states with a sample size of less than 275: Alaska, Montana, New Mexico, North Dakota, South Dakota, Vermont, Wyoming, and the District of Columbia. However, we include these states in the summary tables below.

I. National summary

There are several key takeaways:

More than 80% of Americans support closing non-essential businesses. Support for limiting restaurants, closing schools, canceling sporting and entertainment events, and group gatherings exceeds 90%. A total of 94% strongly or somewhat approve asking people to stay home and avoid gathering in groups; 92% support canceling major sports and entertainment events; 91% approve closing K-12 schools; 91% approve limiting restaurants to carry-out only; 83% approve closing businesses other than grocery stores and pharmacies. There are some partisan differences on these items -- Republicans are somewhat less supportive, but even among Republicans large majorities support all of these measures; and, as summarized below, support is largely consistent across every state.

People strongly support the array of social distancing requirements that government has mandated

Do you approve or disapprove of the following measures which federal, state, and local governments could take to prevent the spread of coronavirus (COVID-19) in the next 30 days?

National Sample, N= 22,921, Time period: 04/16/2020 - 04/26/2020
 Source: The COVID-19 Consortium for Understanding the Public's Policy Preferences Across States (A joint project of: The Network Science Institute of Northeastern University; The Shorenstein Center on Media, Politics, and Public Policy, Harvard Kennedy School; School of Communication & Information, Rutgers University)
 • Created with Datawrapper

A bipartisan consensus opposes a rapid “reopening” of the economy. Only 7% support immediate reopening of the economy, and the median respondent supports waiting four to six weeks. There is a bipartisan consensus on waiting (89% of Republicans as compared to 96% of Democrats opposed immediate re-opening), and Republicans support a somewhat faster re-opening of the economy than Democrats, where the median Republican supports waiting two to four weeks versus median Democrat six to eight weeks. As discussed below, even in those Republican-led states which are moving toward re-opening, few people support reopening immediately.

Respondents do not support a rapid “reopening” of the economy

When should the country reopen the economy and resume business activity?

National Sample, N= 22,921, Time period: 04/16/2020 - 04/26/2020

Source: The COVID-19 Consortium for Understanding the Public’s Policy Preferences Across States (A joint project of: The Network Science Institute of Northeastern University; The Shorenstein Center on Media, Politics, and Public Policy, Harvard Kennedy School; School of Communication & Information, Rutgers University)

• Created with Datawrapper

Generally, Americans report adhering to social distancing, indicating that they had minimal social interactions with people outside of their households. That said, 56% reported encountering at least one person from outside of their home in the preceding 24 hours (and 7% reported encountering 10 or more persons); the survey did not contain information on the circumstances of those encounters (e.g., was it at grocery stores? were the individuals wearing masks?). Generally, there were not large differences with respect to age, gender, race, income, partisanship or education. An exception was that Asian Americans were substantially less likely to encounter other individuals, and more likely to avoid contact with other people. There were significant racial differences reported in wearing face masks outside of the home, with 51% of whites reporting following recommendations very closely, along with 62% of Hispanics, 64% of African Americans, and 68% of Asian Americans. There was also an age gradient in this regard, ranging from 50% face mask wearing for 18-24 year olds to

60% of those aged 65 or higher. There were also partisan differences: 51% of Republicans, compared to 64% for Democrats, reported wearing face masks outside the home.

The most trusted groups and organizations regarding the crisis embody expertise. The Centers for Disease Control (CDC) is the most trusted government entity, with nearly 9 in 10 (88%) indicating that they trusted the CDC “some” or “a lot.” A remarkable 96% indicate trust in hospitals and doctors (only 1% “not at all”); and 93% trusted scientists and researchers. This trust is bipartisan, but there are partisan differences in the *degree* of trust (i.e., “a lot” versus “some” trust), where 42% of Republicans versus 55% of Democrats report trusting the CDC a lot; 54% of Republicans versus 66% of Democrats report trusting scientists and researchers a lot; and 73% of Republicans versus 76% of Democrats report trusting doctors and hospitals a lot. Less trusted are social media companies (41%) and news media (56%), with Republicans less trusting than Democrats in both cases.

The most trusted groups and organizations regarding the crisis embody expertise

How much do you trust the following people and organizations to do the right thing to best handle the current coronavirus (COVID-19) outbreak?

National Sample, N= 22,921, Time period: 04/16/2020 - 04/26/2020

Source: The COVID-19 Consortium for Understanding the Public’s Policy Preferences Across States (A joint project of: The Network Science Institute of Northeastern University; The Shorenstein Center on Media, Politics, and Public Policy, Harvard Kennedy School; School of Communication & Information, Rutgers University)

Created with Datawrapper

State and city governments are more trusted than the federal government, with 81% indicating trust in their state government and 82% in their city government, compared with only 57% in Congress (13% “not at all”), and 51% in President Trump (32% “not at all”). Unsurprisingly, there are huge partisan differences in trust of President Trump; with 55% of Republicans reporting trusting Trump “a lot” and only 8% of Democrats and 18% of Independents similarly trusting Trump.

Approval of federal reactions to the outbreak is mixed, with four in ten respondents saying that the federal government was not taking the outbreak seriously enough (versus 51% saying about right and 9% saying that they are overreacting). There is an enormous partisan divide on this point, with only 14% of Republicans saying that the federal government was not taking the outbreak seriously enough versus 62% of Democrats and 41% of Independents. In contrast, there is substantial agreement that the state governments of respondents are reacting properly (72%), and in every state at least 55% of respondents say that their state is responding about right.

Interestingly, many Republicans (39%) and, especially, Democrats (57%) believe that “ordinary people across the country” are not taking the outbreak seriously enough.

There is significant disapproval of federal reactions to the outbreak

Thinking about how different people and groups are reacting to the coronavirus (COVID-19) outbreak, how would you say each of the following is reacting? - The federal government

National Sample, N= 22,921, Time period: 04/16/2020 - 04/26/2020

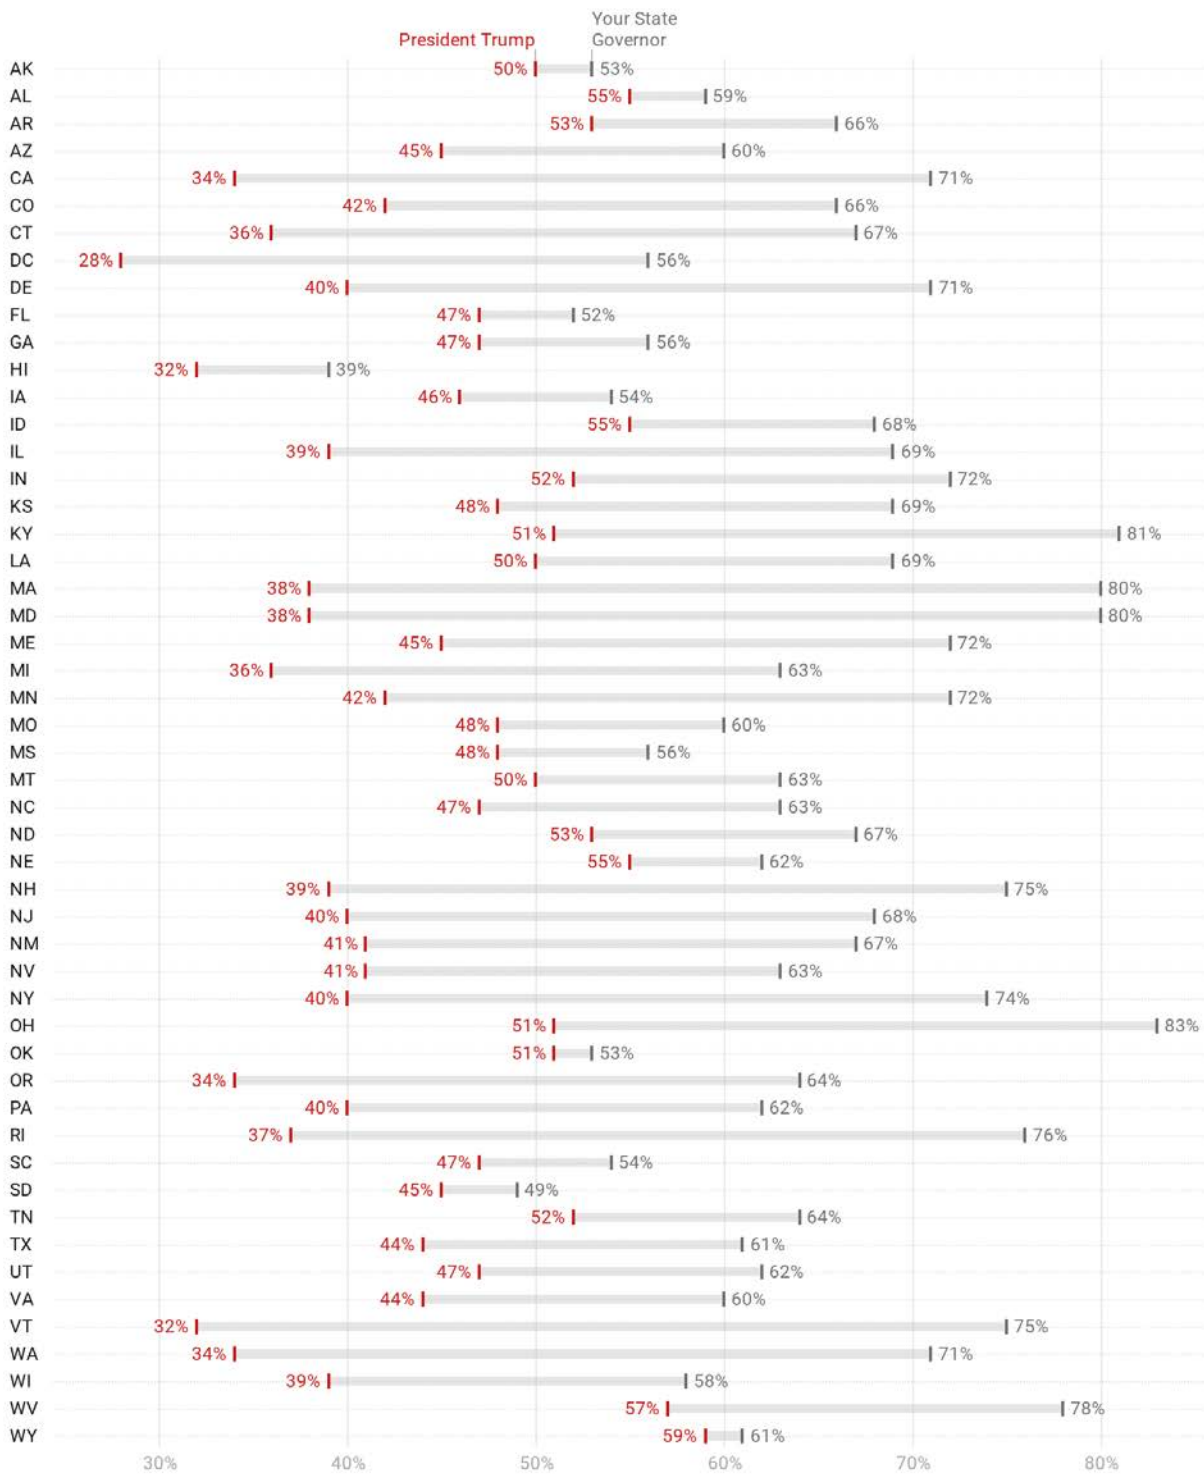

Source: The COVID-19 Consortium for Understanding the Public's Policy Preferences Across States (A joint project of: The Network Science Institute of Northeastern University; The Shorenstein Center on Media, Politics, and Public Policy, Harvard Kennedy School; School of Communication & Information, Rutgers University)

• Created with Datawrapper

Approval of President Trump’s handling of the outbreak is polarized by party. Overall, 44% approve and 40% disapprove of his handling of the outbreak, with 83% of Republicans, and only 16% of Democrats approving. **President Trump’s approval rating is below that of every governor.** About 66% of individuals approve of their governor's handling of the outbreak.

President Trump's approval rating is below that of every governor

Do you approve or disapprove of the way President Trump/your state governor is handling the coronavirus (COVID-19) outbreak?
[Net: Approve]

National Sample, N= 22,921, Time period: 04/16/2020 - 04/26/2020

Source: The COVID-19 Consortium for Understanding the Public's Policy Preferences Across States (A joint project of: The Network Science Institute of Northeastern University; The Shorenstein Center on Media, Politics, and Public Policy, Harvard Kennedy School; School of Communication & Information, Rutgers University)

• Created with Datawrapper

The data also highlight the multitude of ways that people get information. We asked “In the last 24 hours, did you get any news or information related to the current coronavirus (COVID-19) outbreak from the following sources?” **Television ranks at the top as a source of information**, with local television cited by 55% and network television by 48%. Older (65+) Americans were more likely to rely on local television (70%), network television (60%), cable television (48%), as compared to younger (18-24 year olds) Americans (41%, 39%, 32%, respectively).

Personal networks are critically important sources of information, with 51% of respondents indicating that they had gotten news or information regarding the coronavirus from friends or family in the preceding 24 hours. Younger people are more reliant on friends and family, with 67% of 18-24 year olds reporting getting news or information from friends and family, as compared to 38% for people aged 65 and older.

Personal networks are critically important

In the last 24 hours, did you get any news or information related to the current coronavirus (COVID-19) outbreak from the following sources?

	All	18 to 24	25 to 44	45 to 64	65+
Local television	55%	41%	46%	60%	70%
Friends and family	51%	67%	58%	45%	38%
Network television (e.g. ABC, CBS, or NBC)	48%	39%	42%	50%	60%
A social media website or app (e.g. Facebook, Twitter, Snapchat)	39%	57%	46%	33%	25%
Cable television (e.g. CNN, Fox News, or MSNBC)	38%	32%	34%	39%	48%
A news website or app (e.g. the New York Times or Fox News websites or apps)	31%	34%	35%	29%	23%
A search engine website or app (e.g. Google, Bing)	23%	32%	28%	19%	14%
Radio news	22%	21%	25%	21%	17%
A government website or app (e.g. CDC.gov)	22%	26%	27%	21%	15%
Print newspapers (e.g. the New York Times or the Wall Street Journal print edition)	12%	8%	10%	10%	19%
A health website or app (e.g. WebMD)	12%	18%	16%	10%	8%
Late-night comedy shows (e.g. The Late Show with Stephen Colbert or The Daily Show)	9%	12%	11%	8%	7%
An organization website or app (e.g. WHO.int)	9%	14%	12%	7%	4%
Podcasts	7%	11%	10%	5%	2%

National Sample, N= 22,921, Time period: 04/16/2020 - 04/26/2020

* Created with Datawrapper

Among social media, Facebook towered over its competitors, with 50% of individuals indicating they got information regarding COVID-19 from Facebook. (YouTube, still a major source of information, is a distant second at 24%). Facebook also had the most age-diverse usage patterns among the social media, with 46% of 18 to 24 year olds reporting getting information from Facebook, versus 36% for 65 and over (reliance on Facebook has an inverse U relationship, peaking for 25-44 year olds, at 62%). YouTube and Instagram have nearly the same usage as Facebook among the youngest cohort (42% for YouTube and 41% for Instagram), but much smaller usage in the older cohort (9% and 2%). Facebook is also

used pretty evenly across racial groups, while YouTube and Instagram are more popular among non-white minorities (for YouTube: 18% usage by white respondents, versus 34% for Hispanics, 33% for African Americans, and 38% among Asian Americans; and for Instagram, 12% for white respondents, versus 23% for Hispanics, 22% for African Americans, and 20% for Asian Americans).

President Trump’s daily press briefings are a major source of information, with 40% of respondents indicating they gained information from his briefings in the preceding 24 hours, exceeding, for example, CNN (37%), Fox News (37%), and MSNBC (19%). There is a substantial partisan gap, with 50% of Republicans getting information from a press briefing versus 30% of Democrats.

President Trump’s daily press briefings are a major source of information

In the last 24 hours, did you get any news or information related to the current coronavirus (COVID-19) outbreak from the following sources?

National Sample, N= 22,921, Time period: 04/16/2020 - 04/26/2020

II. State summary

In this section, we highlight some of the more striking findings from our surveys of all 50 states.

There is a strong relationship between the prevalence of COVID-19 in a state and the sense of having normal life disrupted by the pandemic. States like New York (66% of respondents) and New Jersey (62%), [which have the most diagnosed COVID-19 cases](#) also reported the highest percentages of respondents indicating that their personal life had been disrupted “a lot” or “a great deal”.

Across the 50 states, respondents expressed greater worry that a family member might contract COVID-19 than that they themselves would contract the virus. Perhaps unsurprisingly, New Yorkers were most likely to worry “somewhat” or “a great deal” about both themselves (79%) and their family members (86%). (Rhode Island matched New York with 86% worrying about their family members contracting the virus.) Americans were also more consistent across the states in their degree of concern about their family members than about themselves. The state-by-state variation in responses was far higher with respect to peoples’ concerns over their own risk of contracting the virus (36 percentage points, from a low of 43% to a high of 79%) than with respect to their concern over family members becoming infected (22 percentage points, from a low of 64% to a high of 86%).

Residents of all 50 states are more concerned about their own and their family’s risks of contracting COVID-19 than about losing their jobs or suffering financial hardships. But comparing average levels of concern over contracting the virus (self and family) with average levels of economic concern (jobs and finances), this differential, which averages 19 percentage points, varies widely across the states (from a low of 9 percentage points in Colorado to a high of 31 points in Maine). Residents of New York, Connecticut and Rhode Island top the states in terms of concerns over contracting COVID with 80% or more of respondents, on average, indicating concern (“somewhat” or “a great deal”) over the risk to themselves or their family members. Nevada and Hawaii residents are most concerned about

jobs and financial hardships, with 62% of respondents in both states expressing such concerns, followed by New Jersey at 61%, and then Texas, Arkansas, and New York, at 60%.

We found extremely high and consistent levels of support for government restrictions put in place to combat COVID-19. We asked respondents about eight such policies, including stay-at-home orders, mandatory closure of non-essential businesses, cancellation of major sports and entertainment events, closing of K-12 schools, requiring restaurants to limit their service to carry-out, restricting international travel to the U.S., and restricting domestic travel, as well as monitoring cell phones in order to track exposure to sick people.

Across the nation, no fewer than 70% of respondents in any state in the union approved (somewhat or strongly) of these eight restrictions, on average.¹ New York, Maryland, and Massachusetts respondents expressed the highest average level of support (87-88%) for the eight restrictions.

There is substantial agreement that the state governments of respondents are reacting properly

Thinking about how different people and groups are reacting to the coronavirus (COVID-19) outbreak, how would you say each of the following is reacting: Your state government

State	Not taking the outbreak seriously enough	Reacting about right	Overreacting to the outbreak	Error Margin	N
AK	19%	66%	15%	12%	92
AL	27%	65%	8%	5%	484
AR	23%	69%	9%	5%	474
AZ	23%	65%	12%	5%	506

 * Created with Datawrapper

¹ If we exclude the aforementioned seven states where we had fewer than 275 observations, the figure increases to 80%.

State-level support for restrictive measures

Support for measures meant to curb the spread of COVID-19. State averages are presented as dots and the national average is marked with a triangle for comparison.

As noted above, we found very little support for an immediate reopening of the states. In fact, majorities of respondents in all but one state (Idaho) supported waiting a month or more prior to reopening.² If we look at three states that as of April 26th, according to the [New York Times](#), are already reopening -- Georgia, Oklahoma, and South Carolina -- between 59 and 63% of respondents prefer to wait four weeks or more before reopening.³ The New York Times identifies another eleven states that are preparing to begin reopening in the near future. These include Alabama, Arizona, Colorado, Florida, Idaho, Maine, Minnesota, Mississippi, Nevada, Tennessee, and Texas. Across these eleven states, an average of 59% of respondents favored waiting a month or more before reopening.

In every state in the union, residents approve of their own governor's handling of the COVID crisis (defined as "approve" or "strongly approve") more highly than they rate that of President Trump. The average gap across the 50 states was 22 percentage points (66 for governors compared to 44% for Trump). That said, the gaps between the governor and the president vary widely, ranging from around 2 percentage points in Oklahoma to a cavernous gap approaching or exceeding 40 points in several solidly Democratic states, like Rhode Island and California. Interestingly, three of the four states with the largest such gaps (40-42 percentage points) are reliably blue states with Republican governors: Maryland, Massachusetts, and Vermont. The highest rated governors include the governors of Ohio (83%), Kentucky (81%), Maryland (80%), and Massachusetts (80%).

As noted above, **there is substantial agreement that the state governments of respondents are reacting properly** (72%). States that rank relatively low in this regard include: Hawaii (55%), Florida (60%), Iowa (60%), Oklahoma (60%), South Carolina (63%), and Georgia (64%). Notably high are Ohio (84%), Massachusetts (84%), Rhode Island (83%), Connecticut (81%), Kentucky (81%), Maryland (81%), Maine (81%), and New Hampshire (80%).

² Three states that, as noted, were excluded from this discussion due to large error margins (Montana, North Dakota, and Wyoming) were also exceptions.

³ Although the New York Times reports that Alaska and Montana are partially reopening on April 26th, we exclude these states from analysis due to large error margins.

III. National Data Tables

National Data: Demographics

Gender	
Category	Perc.
Male	48%
Female	52%

*National Sample, N= 22921 , time period
